

System Architecture Flow

Updated File Logic:

- **Filename Generation:** Both NSE-Option-Scanner-Backtest.py and Excel-Generation.py now dynamically handle the filename based on the input date, converting it to the DDMYYYYY format (e.g., 22-05-2026 becomes backtest_trade_book_22052026.csv).
- **Multi-Timeframe Support:** Running-Backtest.py now uses argument parsing to execute your backtest logic across any number of timeframes you specify.

How to Run:

You can execute the backtest from your terminal by specifying the date and the timeframes (in minutes) you wish to scan:

Run for a specific date across all default timeframes (1, 3, 5, 10, 15, 30, 1440)

```
python Running-Backtest.py 2026-05-22
```

Run for a specific date with custom timeframes

```
python Running-Backtest.py 2026-05-22 --timeframes 5,15,30
```
